OMAN CABLES INDUSTRY

DEDICATED TO
DELIVERING EXCELLENCE
IN THE CABLE
MANUFACTURING
INDUSTRY

Oman Cables Industry SAOG develops, manufactures and distributes a totally integrated variety of electrical products, which include medium voltage power cables, low voltage power & control cables, instrumentation cables, pilot cables, overhead power transmission line conductors and building wires. Oman Cables also offers cables with special features and customized solutions.

Our cable and wire products provide a comprehensive range of construction material putting quality, compliance and a strong customer focus at the heart of operations.

MARKET SEGMENTS

Utilities
(Power & Water)

Building and
Construction
Industries

Oil & Gas and
Petrochemicals

Industrial, Mining
& Processing Plants

Transportation
& Infrastructure

Renewables

Being a leading cable supplier, we believe cables are fundamental to every project. By sharing our technical expertise and creating a highly customer-centric approach to how we operate, we can help our clients create cable connections that deliver the performance their projects demand.

VOLTAGE DESIGNATION

VOLTAGE DESIGNATION

A) RATED VOLTAGE:

Rated voltage grade of the cables is designated as U₀/U (U_m), where:

U₀: rated power frequency voltage between phase & earth or metallic screen for which cable is suitable. Also, known as phase voltage or phase to neutral/earth.

U: rated power frequency voltage between phase conductors for which cable is suitable. Also, known as line voltage or phase to phase voltage.

U_m: maximum sustained power frequency voltage between phase conductors for which cable is suitable.

A.1: Rated voltage as per different specifications:

Voltage designations as per IEC 60502-2 & BS 6622 are different & as mentioned in below table, however, the insulation thickness & U_m as per IEC 60502-2 & BS 6622 are same which means cables as per IEC 60502-2 cables can be used for cables as per BS 6622 & vice-versa.

VOLTAGE GRADE AS PER IEC 2-60502	VOLTAGE GRADE AS PER BS EN 6622	NOMINAL INSULATION THICKNESS
3.6/6 (7.2) kV	3.8/6.6 (7.2) kV	2.5 mm (for 10mm ² to 185mm ²) 2.6 mm (for 240mm ²) 2.8 mm (for 300mm ²) 3.0 mm (for 400mm ²) 3.2 mm (for > 400mm ²)
6/10 (12) kV	6.35/11 (12) kV	3.4 mm
8.7/15 (17.5) kV	8.7/15 (17.5) kV	4.5 mm
12/20 (24) kV	12.7/22 (24) kV	5.5 mm
18/30 (36) kV	19/33 (36) kV	8.0 mm

B) SYSTEM CATEGORY:

The rated voltage of the cable for a given application shall be suitable for the operating conditions in the system in which the cable is used. To facilitate the selection of the cable, systems are divided into three categories:

Category A: This category comprises those systems in which any phase conductor that comes in contact with earth or an earth conductor is disconnected from the system within 1 min;

Category B: This category comprises those systems which, under fault conditions, are operated for a short time with one phase earthed. This period, according to IEC 60183, should not exceed 1 h. For cables covered by IEC 60502-2/BS 6622, a longer period, not exceeding 8 h on any occasion, can be tolerated. The total duration of earth faults in any year should not exceed 125 h;

Category C: This category comprises all systems which do not fall into category A or B.

It should be realized that in a system where an earth fault is not automatically and promptly isolated, the extra stresses on the insulation of cables during the earth fault reduce the life of the cables to a certain degree. If the system is expected to be operated fairly often with a permanent earth fault, it may be advisable to classify the system in category C.

The values of U₀ recommended for cables to be used in three-phase systems are listed in below table:

RATED SYSTEM VOLTAGE (kV)	SYSTEM CATEGORY (A/B/C)	HIGHEST SYSTEM VOLTAGE (U _m) (kV)	RATED VOLTAGE GRADE (U ₀ /U [U _m])
6.0 or 6.6	A or B	7.2	3.6/6 (7.2)
6.0 or 6.6	C	7.2	6/10 (12)
10 or 11	A or B	12.0	6/10 (12)
10 or 11	C	12.0	8.7/15 (17.5)
15	A or B	17.5	8.7/15 (17.5)
15	C	17.5	12/20 (24)
20 or 22	A or B	24.0	12/20 (24)
20 or 22	C	24.0	18/30 (36)
30 or 33	A or B	36.0	18/30 (36)
30 or 33	C	36.0	-

MEDIUM VOLTAGE CABLES

MEDIUM VOLTAGE CABLES

CONSTRUCTIONAL FEATURES:

CONDUCTOR

Conductor is the metallic part of cables that is carrying the electric current. Better the conductivity, better is the material. Conductor materials are mainly:

- i) Copper
- ii) Aluminum

The conductor structure shall comply to the requirements of BS EN 60228 / IEC 60228.

Depending upon the application area, the conductors shall be water-tight.

CONDUCTOR SCREEN

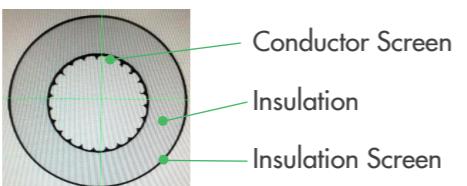

An extruded layer of semi-conductive material is applied over the conductor. This layer acts to smooth out any irregularities and thus reduces the probability of protrusions into the insulating layer. Such protrusions into the insulation or into the semi-conducting layer increase the localized stress that may exceed the breakdown strength of the insulation, so the semi-conductive layer is acting as a stress control layer.

INSULATION

Each core conductor is insulated by extruded cross-linked **Polyethylene**. The insulating compound is a developed material suitable for application through CCV technology. Upon customer request, a fire retardant' XLPE (TR-XLPE) insulation is used. The insulation thickness is selected based on the designated voltage grade complying with IEC 60502-2 & BS 6622.

INSULATION SCREEN

Over the insulation, an extruded layer of cross linked semi-conducting compound is applied. This layer, which has a very smooth surface, is a transition from the insulating material where the electric field exists to a conductive metallic screen, where the electric field is zero, so it will reduce the stress enhancement at the insulation layer. The insulation's shield layer could be bonded to the insulation or strippable type for easily removable to facilitate splicing and terminating.

Typical Cross-sectional Diagram of Triple Extrusion MV Layer

METALLIC SCREEN

Metallic screen is provided over the extruded insulation semi-conductive layer which is necessary to cancel out the electric field outside the cable and to provide a low resistance path for charging current to flow to ground. Depending upon the metallic short circuit current rating, the screening can be done either by Metallic Tape or Metallic Wires. Generally, CU Tape & CU Wires are in use. However, various other metallic tapes / wires e.g. Aluminum etc. can also be used.

CORE IDENTIFICATION

Core identification is provided either by provided Colored ID Tape below the metallic screen or by number printing over the Black colored insulation screen.

CORE ASSEMBLY

In case of multi-core cables, the screened cores are laid up together with non-hygroscopic polypropylene (PP) filler. Fillers are used to maintain cable circularity. Extruded bedding material can also be used in place of PP Fillers to maintain the cable circularity. However, it is always recommended to use PP Fillers due to lighter weight & better flexibility. Binder tape is provided to hold the laid-up assembly along with PP Fillers.

SEPARATION SHEATH

Extruded bedding layer serves as a bedding for armour wires / tapes. This also helps to protect the laid-up core assembly from damage. Depending upon the outer sheath material & special flame retardant property, the separation sheath can be of PVC, LSZH & PE.

ARMOURING

Armouring provides mechanical protection against crushing forces. Armour also can serve as an Earth Continuity Conductor (ECC). The Armoring type could be:

- Wire armouring.
- Double Tape armouring.

Armouring material can be galvanized steel for multi-core cables and aluminium for single core cables.

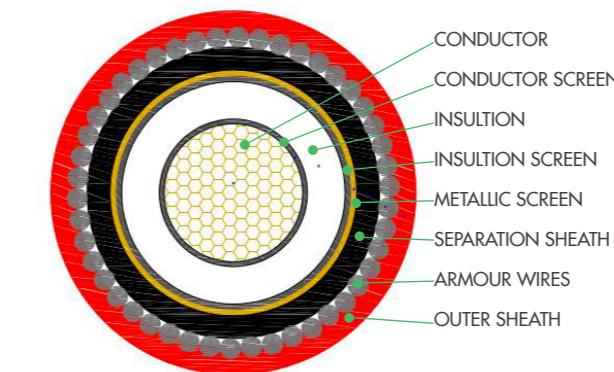

Depending upon the cable application & special requirement from customer's end, OCI can provide different kinds of tapes over & below the armouring.

OUTER SHEATH

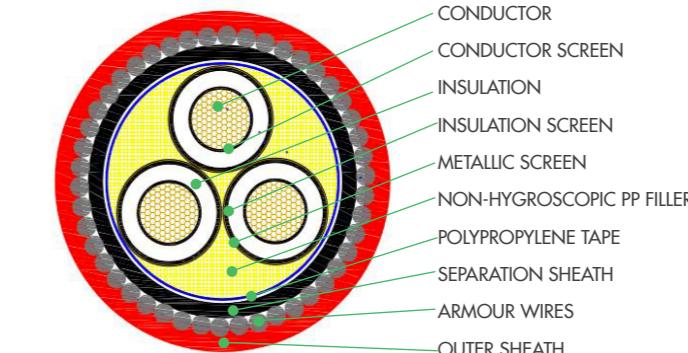

It is the outer protection part of the cable against the surrounding environment. Depending upon the special properties & the application area, the outer sheath material can be of PVC, LSZH & PE. Properties of different outer sheath material is as explained in table mentioned on next page. As a special application, special additives are added to meet below properties:

- Anti-rat & termite resistant property.
- UV resistant property.
- Oil resistant property.
- Flame retardant property.

Additionally, on customer's request, a layer of graphite coated, or extruded semi-conductive layer is applied over the outer sheath so as to perform sheath integrity test at site after laying.

SPECIAL CHARACTERISTIC

OXYGEN INDEX

The criterion for burning is presence of percentage of oxygen in air. By mixing oxygen and nitrogen at various percentages this test finds at what percentage of oxygen the standard specimen starts burning. Higher the oxygen index higher the resistance to get ignited.

TEMPERATURE INDEX

Temperature index is the temperature at which the oxygen index of the material becomes 21. This test is carried out usually by extrapolation after the oxygen index is measured at various temperatures.

SMOKE DENSITY

This parameter relates to measuring and observing relative amounts of smoke produced by the burning or decomposition of materials. This test is carried out in accordance with ASTM D 2843. The measurements are made in terms of loss of light transmission through a collected volume of smoke produced under control standardized conditions.

ACID GAS EMISSION

During burning of cable materials acid gases are evolved especially hydrogen chloride. The gas emission is evaluated in accordance with test method IEC 60754-1, where approximately 1 gm. of the material is pyrolyzed at 800°C in a combustion tube and resultant gases are analyzed.

FLAME RETARDANCE (IEC 60332-1)

A single cable sample is clamped vertically. The flame is applied for a period of time depending upon the diameter of the cable. The test requirement is that after all burning has ceased the charred or affected portion shall not have reached within 50 mm from the top clamp.

FLAME RETARDANCE TEST (IEC 60332-3)

This test is carried out to check flame retardant properties of bunched cables. Three categories of tests namely category "A", "B" and "C" have been defined according to quantity of combustible material available over unit length. Cable pieces are tied on vertical ladder and flame is applied from a horizontal ladder. After the specified time the burner is removed. All parameters are pre-defined according to specification. The charred portion is measured and compared with the standards to decide on acceptability.

SPECIAL MATERIAL PROPERTY	APPLICABLE TEST STANDARDS	DIFFERENT GRADES OF SHEATHING MATERIAL						
		PVC Type ST 2		ST 8	PE ST 7			
		FR	FRRT	FRLS	FROR	LSZH	PE	FRPE

Note: These properties of material & cable are provided as per project requirement and subject to change based on manufacturing practices.

OMAN CABLES QUALITY ASSURANCE FOR MV CABLES

In order to ensure the best quality products, it is essential to test and inspect the product at each stage of manufacturing including raw materials and finished product.

Oman Cables Quality Assurance System includes:

RAW MATERIALS INSPECTION:

All the raw materials are sourced from internationally approved companies, known for their quality products. Once the material is received with their product certificate, Oman Cables quality team tests and inspects the same again. Only those materials which meet Oman Cables internal standards are released for production.

FINISHED PRODUCT INSPECTION:

Oman Cables products are fully tested to the applicable standard to which it is manufactured before leaving the factory.

MV CABLE'S TESTING PROCEDURE

MV CABLE'S TESTING PROCEDURE

1. ROUTINE TESTS

Routine tests are normally carried out on each manufactured length of cable. The routine tests carried out in our manufacturing facilities are as follows:

- a) Measurement of the electrical resistance of conductors;
- b) Partial discharge test on cables having cores with conductor screens and insulation screens;
- c) Voltage test.

2. SAMPLE TESTS

The sample tests carried out in our manufacturing facilities are as follows:

- a) Conductor examination;
- b) Check of dimensions;
- c) Voltage test for cables of rated voltage above 3.6 / 6 (7.2) kV;
- d) Hot set test for XLPE insulations

3. TYPE TESTS

When type tests have been successfully performed on a type of cable covered by this catalogue with a specific conductor cross sectional area and rated voltage, type approval shall be accepted as valid for cables of the same type with other conductor cross-sectional areas and/or rated voltages, provided the following three conditions are all satisfied:

- a) The same materials, i.e. insulation and semi-conducting screens, and manufacturing process are used;
- b) The conductor cross-sectional area is not larger than that of the tested cable, with the exception that all cross-sectional areas up to and including 630mm² are approved when the cross-sectional area of the previously tested cable is in the range of 95mm² to 630mm² inclusive;
- c) The rated voltage is not higher than that of the tested cable.

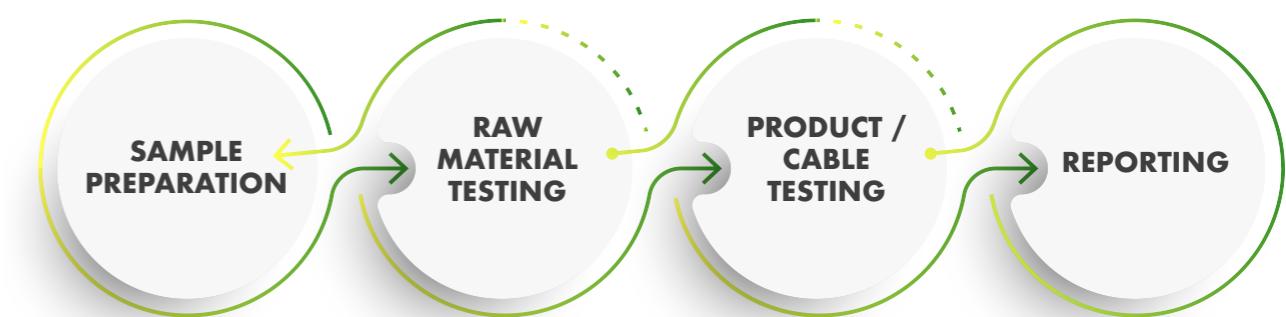

Approval shall be independent of the conductor material.

OMAN CABLES' ADVANCED TESTING LABORATORY

Oman cables' Advanced Testing Laboratory (ATL) is one of its kind laboratory equipped with modern cable testing equipment. ATL has the capability to perform complete cable testing as per the international standards. This includes regular tests like complete cable type test, special tests like accelerated ageing test, flame retardancy, smoke density, toxic gas emission, fire tests as per various IEC & BS standards and many more. This lab is fully dedicated to new product developments & specialized cable's testing. Some key highlights of the ATL are:

- Capable of doing complete type test, research and development and specifically Accelerated Ageing test for MV cable which is among few labs in GCC.
- Independent building spanned over 1500 m².
- ATL follows certifications of ISO 9001, ISO 14001, OHSAS 18001 & BASEC Product Certification Requirements (PCR).

ATL CAPABILITIES: HOW WE DO IT?

SOME OF THE TESTING EQUIPMENT'S FROM OMAN CABLE'S ATL LAB ARE LISTED UNDER:

- Accelerated Ageing & HV Breakdown test.

FIRE AND SMOKE TESTING EQUIPMENT'S:

- Smoke density – 3m cube test chamber.
- Vertical flame propagation test chamber.
- Fire survival circuit integrity test BS-6387 'CW&Z'.
- Fire survival circuit integrity test F120 & PH120.
- Cone Calorimeter.
- Oxygen Index test apparatus.

MECHANICAL TESTING:

- Tensile & Elongation.
- Hot set test for insulation.
- Hardness.

MICROSCOPY

ELECTRICAL:

- Volume resistivity.
- Conductivity.

WEATHERABILITY:

- UV testing
- Moisture content testing

HALOGEN & FLUORINE CONTENT

AGING CAPABILITY

1. ACCELERATED AGEING & HV BREAKDOWN EQUIPMENT

This test performed Accelerated ageing followed by High Voltage Breakdown test on medium voltage cable cores is to assess the water tree growth, life expectancy of cables during service life and minimizing Operational risks to ensure system reliability. Our main objective of this test is to provide standardized qualification test method to give reasonable assurance that an extruded, medium-voltage cable design will meet minimum performance requirements in a wet environment.

OCI'S ACCELERATED AGEING TEST TANK

HIGH VOLTAGE BREAKDOWN TRANSFORMER SETUP AT OCI'S ADVANCED TESTING LAB

ACCELERATED AGEING TRANSFORMERS AT OCI'S ADVANCED TESTING LAB

2. OXYGEN INDEX TEST:

This test performed Accelerated ageing followed by High Voltage Breakdown test on medium voltage cable cores is to assess the water tree growth, life expectancy of cables during service life and minimizing Operational risks to ensure system reliability. Our main objective of this test is to provide standardized qualification test method to give reasonable assurance that an extruded, medium-voltage cable design will meet minimum performance requirements in a wet environment.

3. SMOKE DENSITY – 3M CUBE TEST

The 3 Meter Cube is used for measuring smoke emission when electric cables are burned under defined conditions (IEC 61034). An example would be a few cables burned horizontally. These units are produced to meet the specification used in many electric cable tests.

4. VERTICAL FLAME PROPAGATION TEST

This test chamber is use for assessment of vertical flame spread of vertically mounted bunched wires or cables, electrical or optical under defined conditions.

MV Cables

Product Range

SINGLE CORE MEDIUM VOLTAGE CABLE WITH COPPER CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, UNARMOURED & PVC SHEATH

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switchboards and power stations.

CABLE CONSTRUCTION

Single Core Stranded Annealed Plain Copper Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen and Overall Extruded PVC Outer Sheath.

1. Conductor

2. Conductor Screen
Semi-conducting Conductor Screen

3. Insulation
XLPE

4. Insulation Screen
Semi-conducting Insulation Screen

5. Metallic Screen
Copper Tape

6. Outer Sheath
Extruded Overall PVC Outer Sheath.

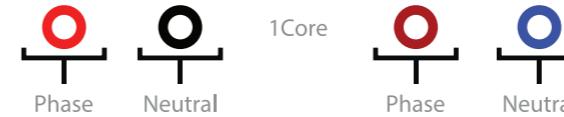

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:

IEC 60502-2

CORE COLOUR IDENTIFICATION:

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

Maximum Operating
Temperature: 90°C

Maximum Short Circuit
Temperature: 250 C

<tbl_r cells="1" ix="4" maxcspan="12" maxrspan="1

SINGLE CORE MEDIUM VOLTAGE CABLE WITH COPPER CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, ALUMINIUM WIRE ARMOURED & PVC SHEATH.

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switch-boards and power stations.

CABLE CONSTRUCTION

Single Core Stranded Annealed Plain Copper Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen , Extruded PVC separation sheath, Aluminium Round Wire Armour and Overall Extruded PVC Outer Sheath.

1. Conductor

Copper Conductor

2. Conductor Screen

Semi-conducting Conductor Screen

3. Insulation

XLPE

4. Insulation Screen

Semi-conducting Insulation Screen

5. Metallic Screen

Copper Tape

6. Separation Sheath

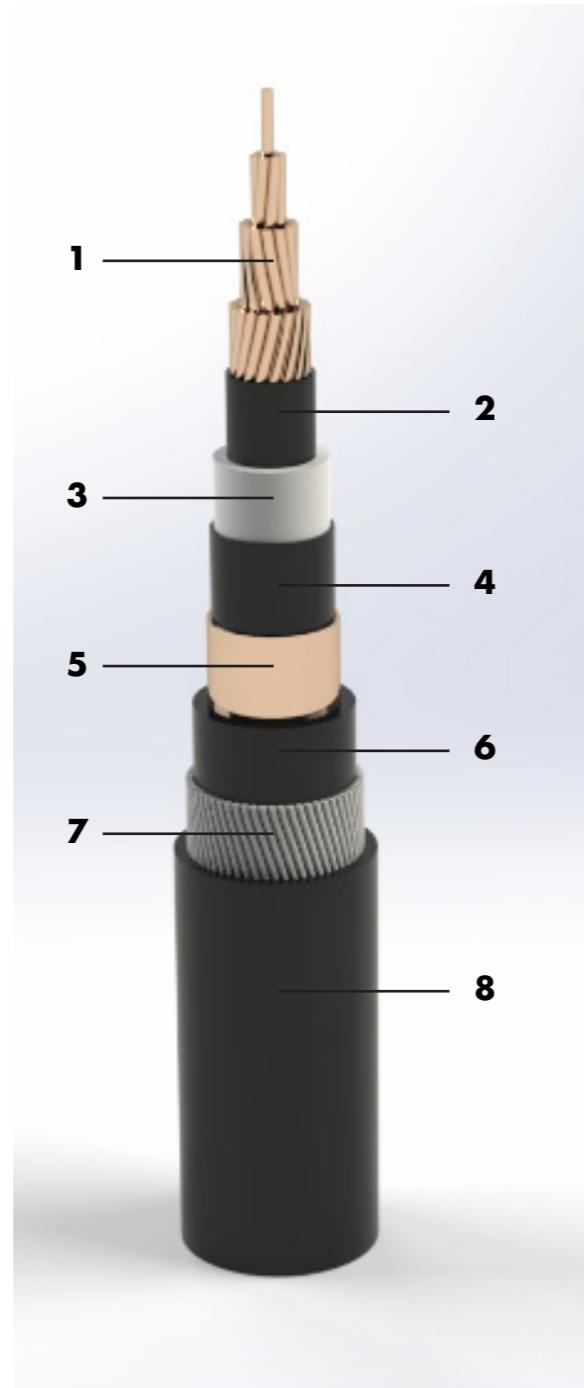

Extruded PVC

7. Armour

Aluminium Round Wire

8. Outer Sheath

Extruded Overall PVC Outer Sheath.

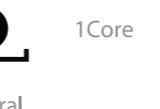

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:
IEC 60502-2
BS 6622

CORE COLOUR IDENTIFICATION:

Phase

Neutral

Phase

Neutral

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

Maximum Operating
Temperature: 90°C

Maximum Short Circuit
Temperature: 250 °C

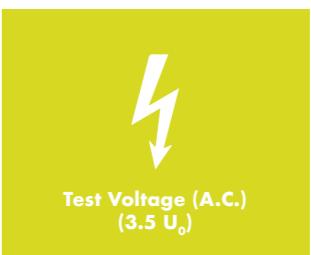

Flame Retardant
IEC 60332-1-2

Rigid

Lead Free

Test Voltage (A.C.)
(3.5 U₀)

VOLTAGE GRADE:

IEC 60502-2

- 3.6/6 (7.2) kV
- 6/10 (12) kV
- 8.7/15 (17.5) kV
- 12/20 (22) kV
- 18/30 (36) kV

BS 6622

- 3.8/6.6 (7.2) kV
- 6.35/11 (12) kV
- 8.7/15 (17.5) kV
- 12.7/22 (24) kV
- 19/33 (36) kV

CABLE INSTALLATION

In duct

In ground with
protection

In free air
Ladders/ Trays

Minimum
Bending Radius

In Trench

Internal Cabling

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:
IEC 60502-2

CORE COLOUR IDENTIFICATION:

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

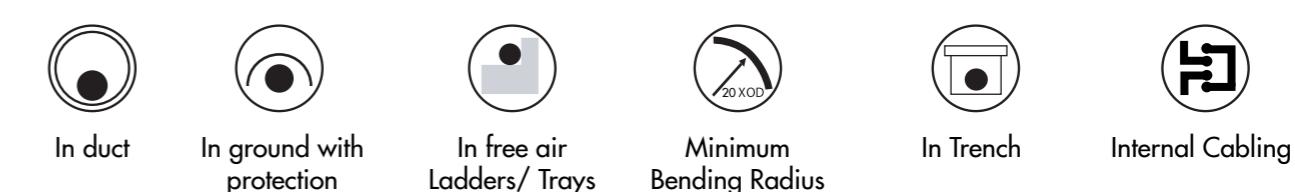

VOLTAGE GRADE:

IEC 60502-2

- 3.6/6 (7.2) kV
- 6/10 (12) kV
- 8.7/15 (17.5) kV
- 12/20 (22) kV
- 18/30 (36) kV

CABLE INSTALLATION

Cable size	Physical Dimensions			Electrical Parameters							
	Cable OD (Approx.)	Cable Weight (Approx.)	Standard Drum Length	DC Resistance at 20°C (Max)	AC Resistance at 90°C (Approx.)	Reactance at 50Hz. (Approx.)	Impedance at 50Hz. (Approx.)	Voltage Drop (Approx.)	Capacitance at 50Hz. (Approx.)	Charging current at U _o & 50 Hz (Approx.)

SINGLE CORE MEDIUM VOLTAGE CABLE WITH ALUMINIUM CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, ALUMINIUM WIRE ARMOURED & PVC SHEATH.

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switch-boards and power stations.

CABLE CONSTRUCTION

Single Core Stranded Aluminium Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen , Extruded PVC separation sheath, Aluminium Round Wire Armour and Overall Extruded PVC Outer Sheath.

1. Conductor

Aluminium Conductor

2. Conductor Screen

Semi-conducting Conductor Screen

3. Insulation

XLPE

4. Insulation Screen

Semi-conducting Insulation Screen

5. Metallic Screen

THREE CORE MEDIUM VOLTAGE CABLE WITH COPPER CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, UNARMOURED & PVC SHEATH.

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switch-boards and power stations.

CABLE CONSTRUCTION

Three Core Stranded Annealed Plain Copper Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen on each core, Fillers of non-hygroscopic polypropylene and Overall Extruded PVC Outer Sheath.

1. Conductor

Copper Conductor

2. Conductor Screen

Semi-conducting Conductor Screen

3. Insulation

XLPE

4. Insulation Screen

Semi-conducting Insulation Screen

5. Metallic Screen

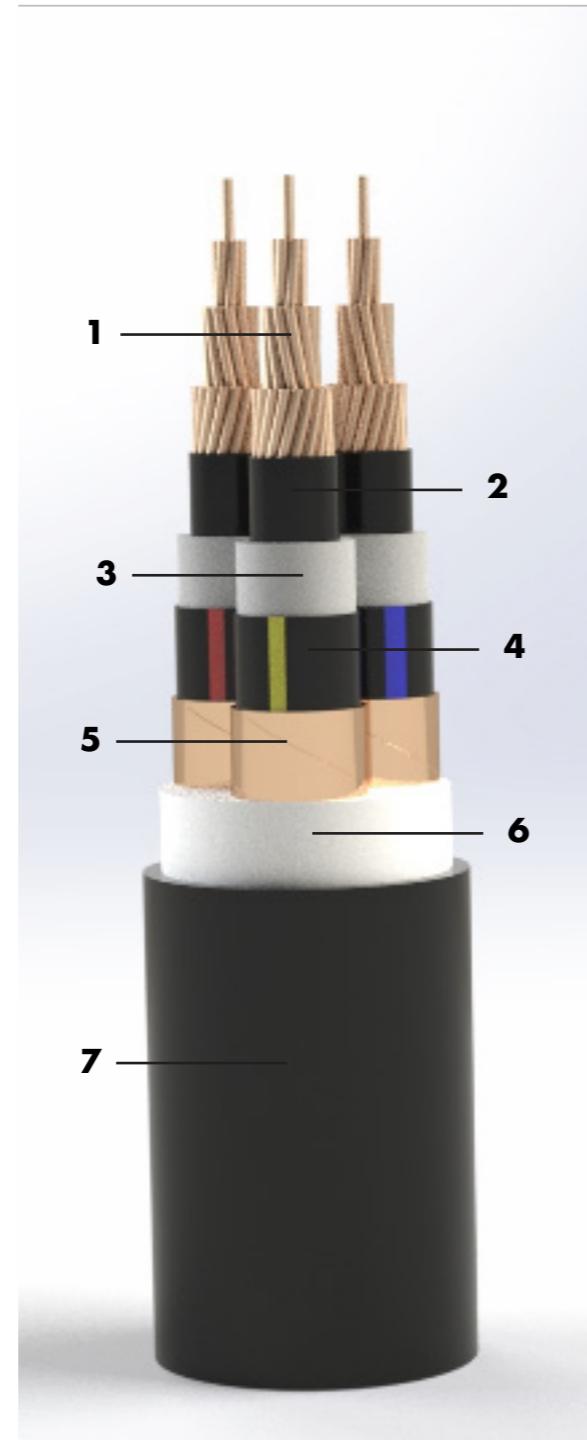

Copper Tape

6. Fillers

Non Hygroscopic PP Fillers

7. Outer Sheath

Extruded Overall PVC Outer Sheath.

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:
IEC 60502-2

CORE COLOUR IDENTIFICATION:

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

VOLTAGE GRADE:

IEC 60502-2

- 3.6/6 (7.2) kV
- 6/10 (12) kV
- 8.7/15 (17.5) kV
- 12/20 (22) kV
- 18/30 (36) kV

THREE CORE MEDIUM VOLTAGE CABLE WITH COPPER CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, GALVANISED STEEL WIRE ARMOURED & PVC SHEATH.

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switch-boards and power stations.

CABLE CONSTRUCTION

Three Core Stranded Annealed Plain Copper Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen on each core, Fillers of non-hygroscopic polypropylene, Extruded PVC Separation Sheath, Galvanized Steel Wire Armour and Overall Extruded PVC Outer Sheath.

1. Conductor

Copper Conductor

2. Conductor Screen

Semi-conducting Conductor Screen

3. Insulation

XLPE

4. Insulation Screen

Semi-conducting Insulation Screen

5. Metallic Screen

Copper Tape

6. Fillers

Non Hygroscopic PP Fillers

7. Separation Sheath

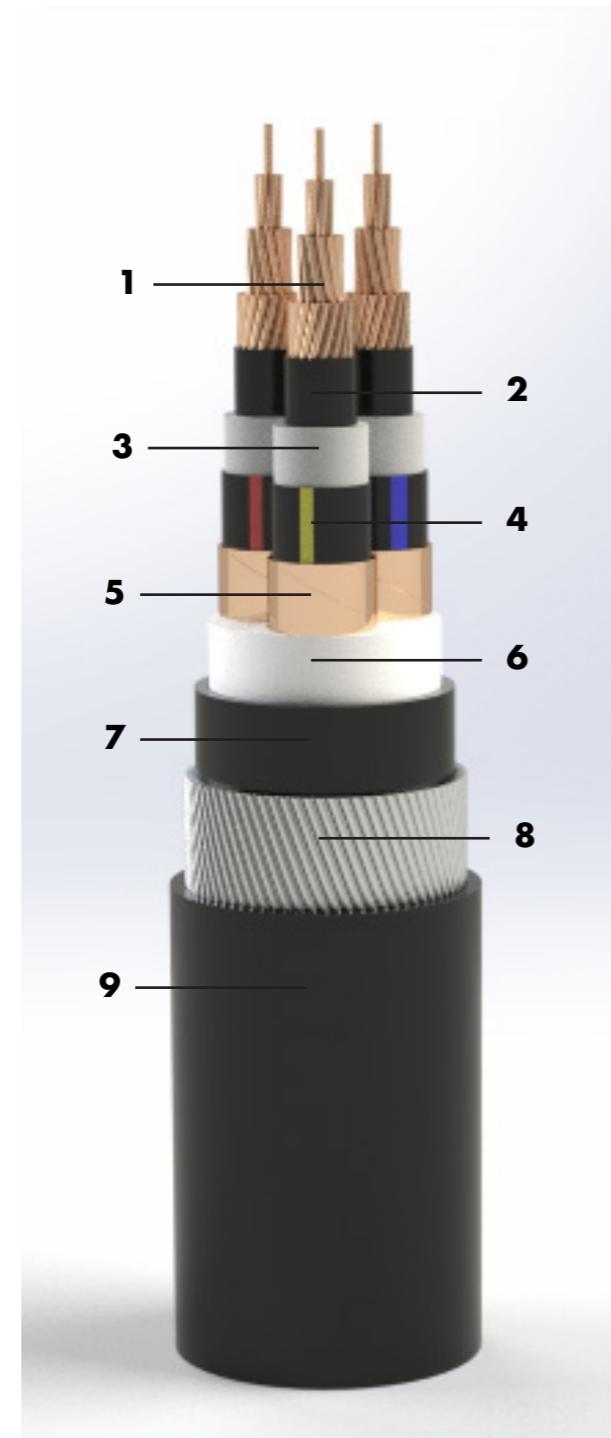

Extruded PVC

8. Armour

Galvanised Steel Wire

9. Outer Sheath

Extruded Overall PVC Outer Sheath.

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:
IEC 60502-2
BS 6622

CORE COLOUR IDENTIFICATION:

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

THREE CORE MEDIUM VOLTAGE CABLE WITH COPPER CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, GALVANIZED DOUBLE STEEL TAPE ARMOURED & PVC SHEATH.

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switch-boards and power stations.

CABLE CONSTRUCTION

Three Core Stranded Annealed Plain Copper Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen on each core, Fillers of non-hygroscopic polypropylene, Extruded PVC Separation Sheath, Galvanized Double Steel tape Armour and Overall Extruded PVC Outer Sheath.

1. Conductor

Copper Conductor

2. Conductor Screen

Semi-conducting Conductor Screen

3. Insulation

XLPE

4. Insulation Screen

Semi-conducting Insulation Screen

5. Metallic Screen

Copper Tape

6. Fillers

Non Hygroscopic PP Fillers

7. Separation Sheath

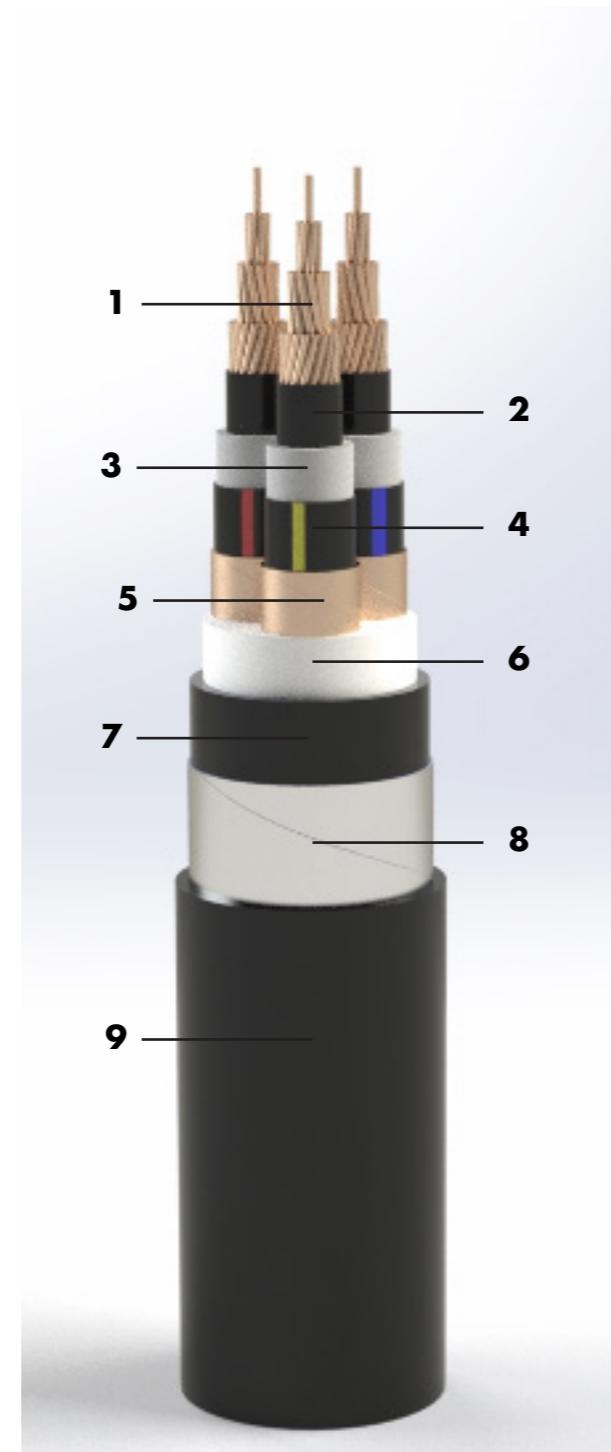

Extruded PVC

8. Armour

Double Steel Tape Armour

9. Outer Sheath

Extruded Overall PVC Outer Sheath.

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:
IEC 60502-2

CORE COLOUR IDENTIFICATION:

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

VOLTAGE GRADE:

IEC 60502-2

- 3.6/6 (7.2) kV
- 6/10 (12) kV
- 8.7/15 (17.5) kV
- 12/20 (22) kV
- 18/30 (36) kV

CABLE INSTALLATION

In duct

In ground with protection

In free air
Ladders/ Trays

Minimum
Bending Radius

In Trench

Internal Cabling

THREE CORE MEDIUM VOLTAGE CABLE WITH ALUMINIUM CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, UNARMOURED & PVC SHEATH.

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switch-boards and power stations.

CABLE CONSTRUCTION

Three Core Stranded Aluminium Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen on each core, Fillers of non-hygroscopic polypropylene and Overall Extruded PVC Outer Sheath.

1. Conductor

Aluminium Conductor

2. Conductor Screen

Semi-conducting Conductor Screen

3. Insulation

XLPE

4. Insulation Screen

Semi-conducting Insulation Screen

5. Metallic Screen

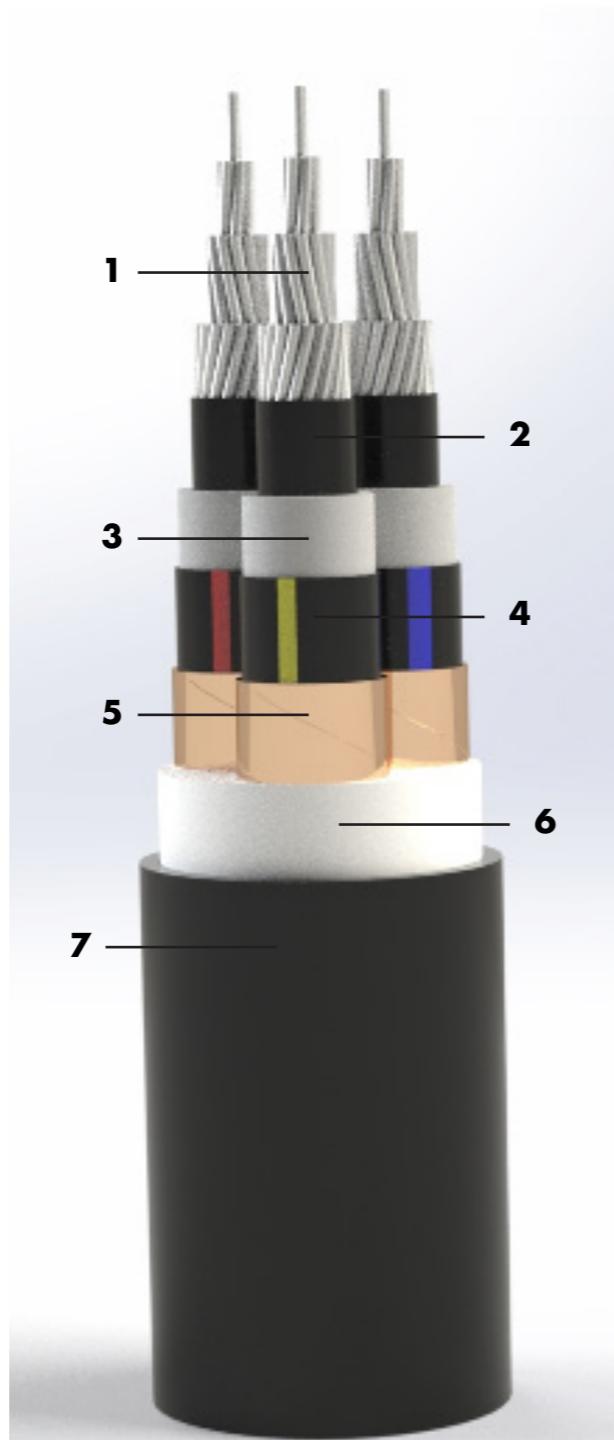

Copper Tape

6. Fillers

Non Hygroscopic PP Fillers

7. Outer Sheath

Extruded Overall PVC Outer Sheath.

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:
IEC 60502-2

CORE COLOUR IDENTIFICATION:

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

VOLTAGE GRADE:

IEC 60502-2

THREE CORE MEDIUM VOLTAGE CABLE WITH ALUMINIUM CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, GALVANISED STEEL WIRE ARMOURED & PVC SHEATH.

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switch-boards and power stations.

CABLE CONSTRUCTION

Three Core Stranded Aluminium Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen on each core, Fillers of non-hygroscopic polypropylene, Extruded PVC Separation Sheath, Galvanized Steel Wire Armour and Overall Extruded PVC Outer Sheath.

1. Conductor

Aluminium Conductor

2. Conductor Screen

Semi-conducting Conductor Screen

3. Insulation

XLPE

4. Insulation Screen

Semi-conducting Insulation Screen

5. Metallic Screen

Copper Tape

6. Fillers

Non Hygroscopic PP Fillers

7. Separation Sheath

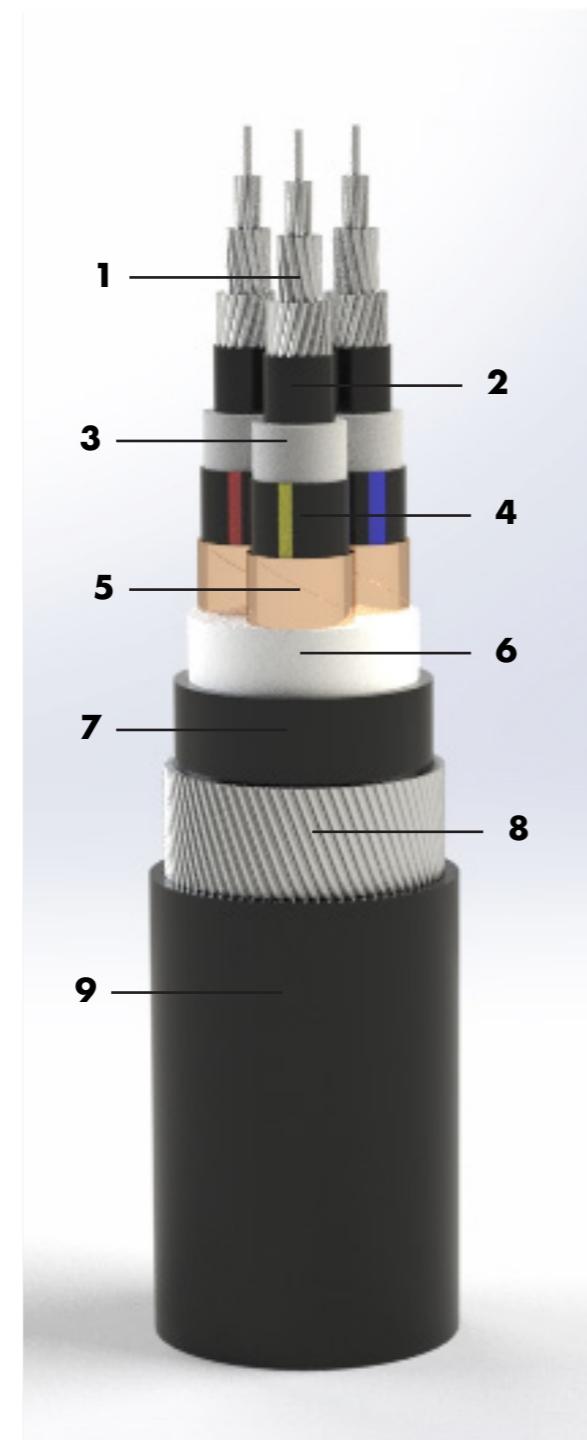

Extruded PVC

8. Armour

Galvanised Steel Wire

9. Outer Sheath

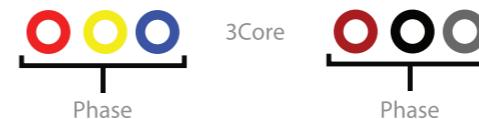

Extruded Overall PVC Outer Sheath.

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:
IEC 60502-2
BS 6622

CORE COLOUR IDENTIFICATION:

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

VOLTAGE GRADE:

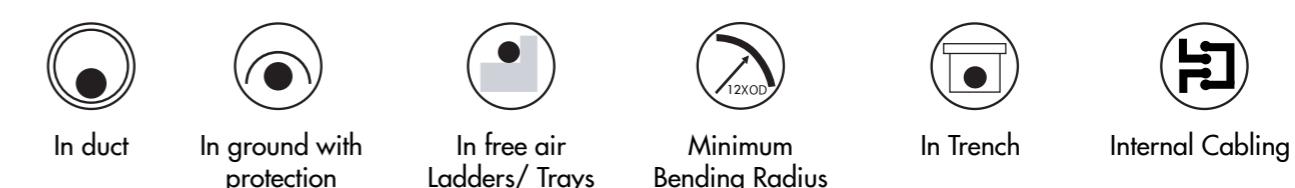

IEC 60502-2

- 3.6/6 (7.2) kV
- 6/10 (12) kV
- 8.7/15 (17.5) kV
- 12/20 (22) kV
- 18/30 (36) kV

BS 6622

- 3.8/6.6 (7.2) kV
- 6.35/11 (12) kV
- 8.7/15 (17.5) kV
- 12.7/22 (24) kV
- 19/33 (36) kV

THREE CORE MEDIUM VOLTAGE CABLE WITH ALUMINIUM CONDUCTOR, XLPE INSULATION, CU TAPE METALLIC SCREEN, GALVANIZED DOUBLE STEEL TAPE ARMOURED & PVC SHEATH.

APPLICATION

Suitable for installations indoors: mostly in power supply stations and outdoors: in cable ducts, underground, and on cable trays for industries, switch-boards and power stations.

CABLE CONSTRUCTION

Three Core Stranded Aluminium Conductor, Extruded Semi-conductive layer of conductor screen, XLPE insulation, Extruded Semi-conductive layer of insulation screen, Copper Tape Metallic Screen on each core, Fillers of non-hygroscopic polypropylene, Extruded PVC Separation Sheath, Galvanized Double Steel tape Armour and Overall Extruded PVC Outer Sheath.

1. Conductor

Aluminium Conductor

2. Conductor Screen

Semi-conducting Conductor Screen

3. Insulation

XLPE

4. Insulation Screen

Semi-conducting Insulation Screen

5. Metallic Screen

Copper Tape

6. Fillers

Non Hygroscopic PP Fillers

7. Separation Sheath

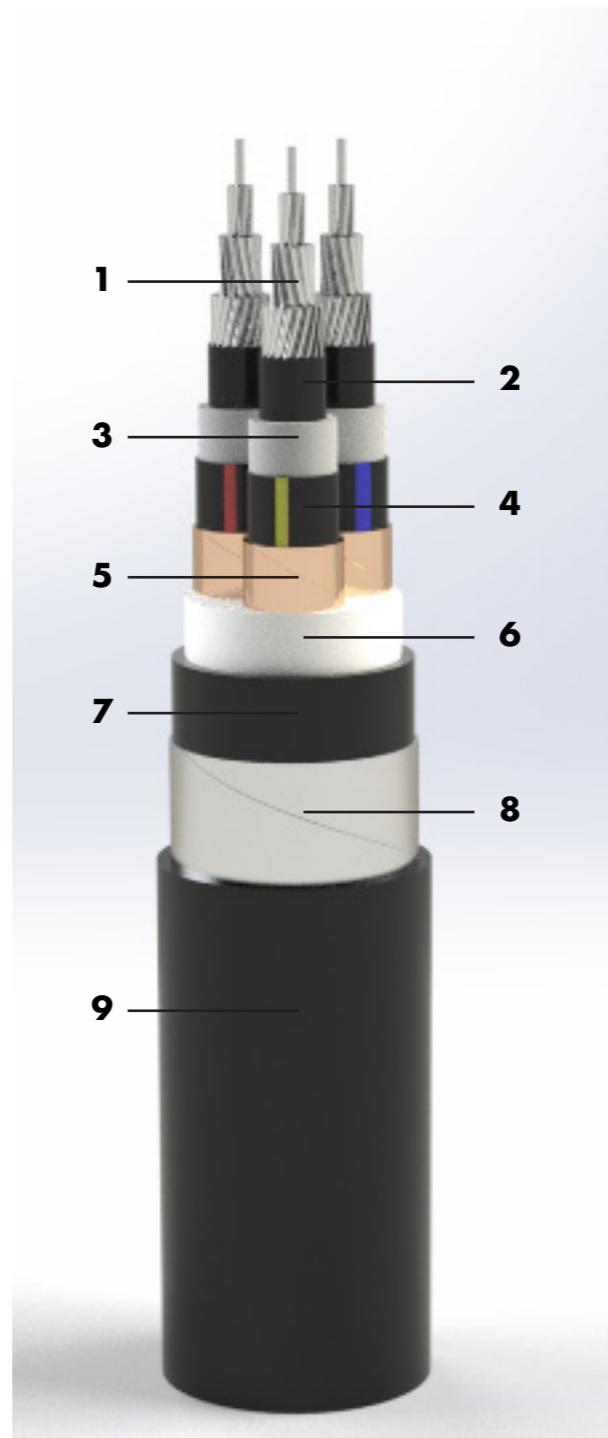

Extruded PVC

8. Armour

Double Steel Tape Armour

9. Outer Sheath

Extruded Overall PVC Outer Sheath.

APPLICATION STANDARDS

Medium Voltage Cables are designed and tested to meet the requirements of below standard:
IEC 60502-2

CORE COLOUR IDENTIFICATION:

However, Oman Cables also supply a wide range of alternative designs to meet customer's special project requirements.

TYPICAL CHARACTERISTICS:

TABLE HH : GROUP RATING FACTORS FOR DIFFERENT LAYING FORMATIONS IN AIR

TABLE HH.1: DE-RATING FACTORS FOR GROUPS OF MORE THAN ONE MULTI-CORE CABLE IN AIR:

METHOD OF INSTALLATION		NUMBER OF TRAYS	NUMBER OF CABLES					
			1	2	3	4	6	9
Cables on perforated trays	Touching	1	1.00	0.88	0.82	0.79	0.76	0.73
		2	1.00	0.87	0.80	0.77	0.73	0.68
		3	1.00	0.86	0.79	0.76	0.71	0.66
	Spaced	1	1.00	1.00	0.98	0.95	0.91	-
		2	1.00	0.99	0.96	0.92	0.87	-
		3	1.00	0.98	0.95	0.91	0.85	-
Cables on vertical perforated trays	Touching	1	1.00	0.88	0.82	0.78	0.73	0.72
		2	1.00	0.88	0.81	0.76	0.71	0.70
	Spaced	1	1.00	0.91	0.89	0.88	0.87	-
		2	1.00	0.91	0.88	0.87	0.85	-
Cables on ladder supports, cleats etc.	Touching	1	1.00	0.87	0.82	0.80	0.79	0.78
		2	1.00	0.86	0.80	0.78	0.76	0.73
		3	1.00	0.85	0.79	0.76	0.73	0.70
	Spaced	1	1.00	1.00	1.00	1.00	1.00	-
		2	1.00	0.99	0.98	0.97	0.96	-
		3	1.00	0.98	0.97	0.96	0.93	-

NOTE 1: Values given are averages for the cable types and range of conductor sizes considered. The spread of values is generally less than 5%.

NOTE 2: Factors apply to single layer groups of cables as shown above and do not apply when cables are installed in more than one layer touching each other. Values for such installations may be significantly lower and must be determined by an appropriate method.

NOTE 3: Values are given for vertical spacings between trays of 300 mm and at least 20 mm between trays and wall. For closer spacing, the factors should be reduced.

NOTE 4: Values are given for horizontal spacing between trays of 225 mm with trays mounted back to back. For closer spacing, the factors should be reduced.

TABLE HH.2: DE-RATING FACTORS FOR GROUPS OF MORE THAN ONE CIRCUIT OF SINGLE-CORE CABLES IN FREE AIR:

METHOD OF INSTALLATION	NUMBER OF TRAYS	NUMBER OF THREE-PHASE CIRCUITS (NOTE 5)			USE AS A MULTIPLIER TO RATING FOR
		1	2	3	
Perforated Trays (Note 3)	1	0.98	0.91	0.87	Three cables in horizontal formation
	2	0.96	0.87	0.81	
	3	0.95	0.85	0.76	
Ladder supports cleats, etc. (Note 3)	1	1.00	0.97	0.96	Three cables in horizontal formation
	2	0.98	0.93	0.89	
	3	0.97	0.90	0.86	
Perforated Trays (Note 3)	1	1.00	0.98	0.96	Three cables in trefoil formation
	2	0.97	0.93	0.89	
	3	0.96	0.92	0.86	
Vertical Perforated Trays (Note 4)	1	1.00	0.91	0.89	
	2	1.00	0.90	0.86	
Ladder supports cleats, etc. (Note 3)	1	1.00	1.00	1.00	
	2	0.97	0.95	0.93	
	3	0.96	0.94	0.90	

NOTE 1: Values given are averages for the cable types and range of conductor sizes considered. The spread of values is generally less than 5%.

NOTE 2: Factors are given for single layers of cables (or trefoil groups) as shown in the table and do not apply when cables are installed in more than one layer touching each other. Values for such installations may be significantly lower and should be determined by an appropriate method.

NOTE 3: Values are given for vertical spacings between trays of 300 mm. For closer spacing, the factors should be reduced.

NOTE 4: Values are given for horizontal spacing between trays of 225 mm with trays mounted back to back. For closer spacing, the factors should be reduced.

NOTE 5: For circuits having more than one cable in parallel per phase, each three phase set of conductors should be considered as a circuit for the purpose of this table.

Short Circuit Current Rating

SHORT CIRCUIT CURRENT RATING OF CONDUCTOR

Short circuit rating is dependent upon various factor as list below:

- a) Conductor material.
- b) Maximum continuous operating temperature & maximum temperature at short circuit.
- c) Fault duration.

$$\frac{I_{sc} = (k * A)}{(t)}$$

where,

I_{sc}: Short circuit current rating

k: Constant (factor dependent upon operating temperature & short circuit temperature)

A: Total cross-sectional area (mm²)

t: Time duration (sec)

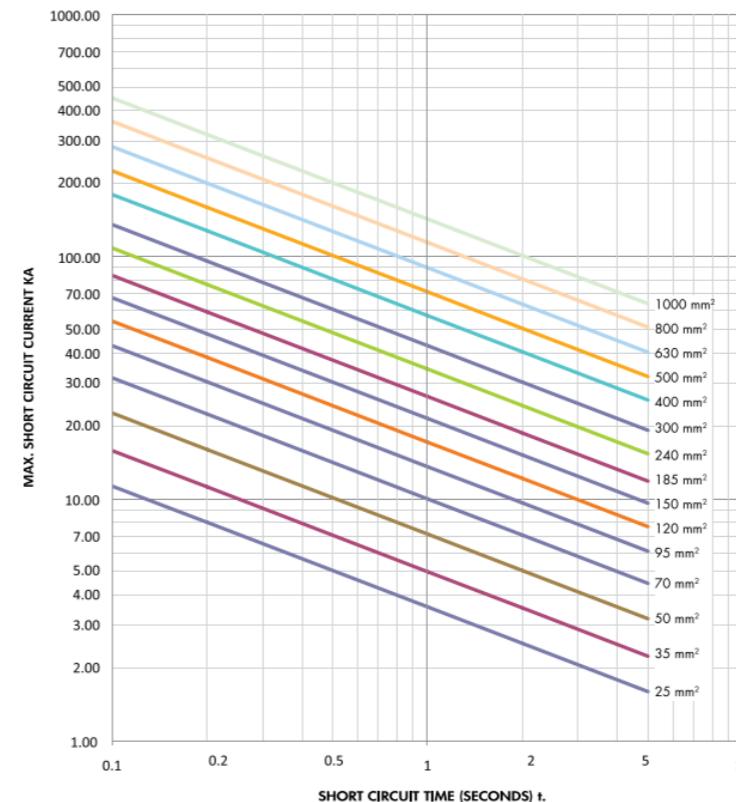

For XLPE insulated cables, the short circuit current rating of copper conductor is calculated by formula mentioned above, considering continuous operating temperature as 90°C and short circuit temperature as 250°C.

For Copper conductor, the constant 'k' is 0.143, and,

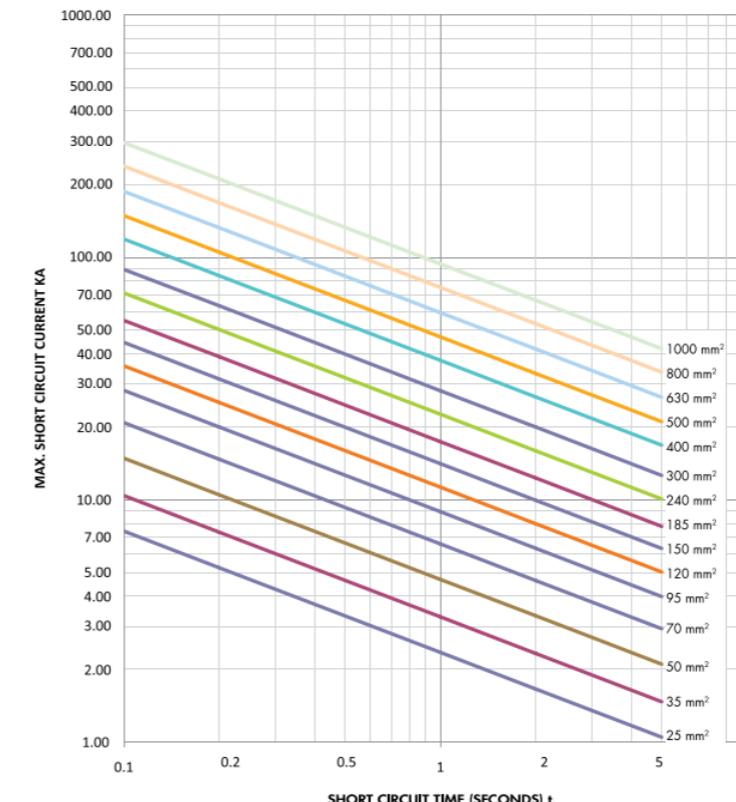

For Aluminium conductor, the constant 'k' is 0.094.

CONDUCTOR SIZE	COPPER CONDUCTOR		ALUMINIUM CONDUCTOR	
	SHORT CIRCUIT RATING FOR 1 SEC.	SHORT CIRCUIT RATING FOR 5 SEC.	SHORT CIRCUIT RATING FOR 1 SEC.	SHORT CIRCUIT RATING FOR 5 SEC.
mm ²	(kA)	(kA)	(kA)	(kA)
25	3.58	1.60	2.35	1.05
35	5.01	2.24	3.29	1.47
50	7.15	3.20	4.70	2.10

MV CABLES WITH WATER-BLOCKING PROPERTY

APPLICATION

Water-tight cables are best suited for installation in wet location.

CONSTRUCTIONAL FEATURES

Oman cables has the capability to manufacture medium voltage cables with longitudinal & radial water blocking properties. Conductor is designed with crushable water blocking tapes & yarns followed by semi-conductive water-blocking tapes to secure water blocking properties. MV Cables can also be manufactured with water-tight metallic screen by providing water-blocking tapes.

SPECIAL PROPERTIES

- Longitudinal water-blocking property.
- Radial water-blocking property.

Typical Construction for MV Cables with water blocking properties

MV CABLES FOR OIL & GAS INDUSTRY

APPLICATION

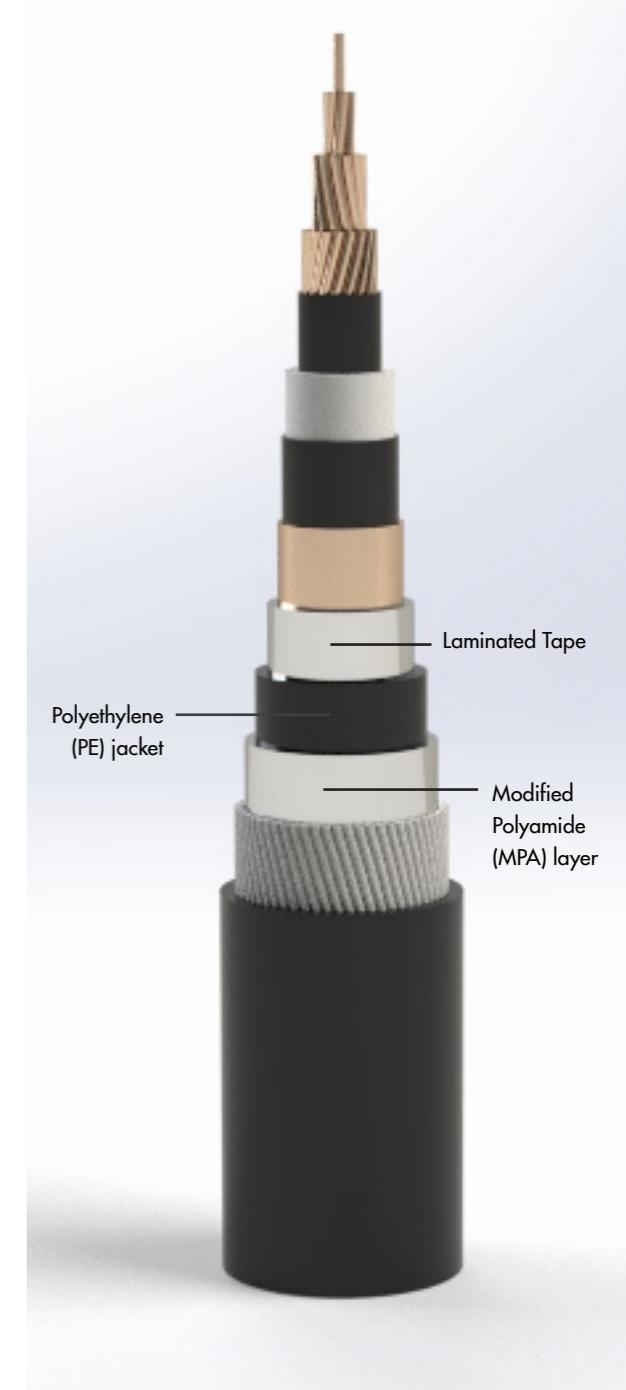

These cables are suitable for installations in chemical or petroleum plants, or any hostile environment where protection against hydrocarbons & other chemical substances is required.

CONSTRUCTIONAL FEATURES

Oman cables has the capability to manufacture medium voltage grade cables with Lead Sheath & Drylam (an alternate option to Lead Sheathed cables).

SPECIAL PROPERTIES

- Hydrocarbons concentration immersion test.
- Chemical resistance property.
- Radial water-blocking property.
- Corrosion resistant.
- Flame retardant property as per IEC 60332-3-22 Cat A.

Typical constructional diagram for Single Core Copper DRYLAM Armored MV Cable

MV CABLES WITH FLAME RETARDANT & LOW SMOKE PROPERTY

APPLICATION

These cables are suitable for installations in fire prone area where flame retardant property is must to have with low smoke property.

CONSTRUCTIONAL FEATURES

Oman cables has the capability to manufacture medium voltage grade cables with Flame Retardant Low Smoke PVC Outer Sheath.

SPECIAL PROPERTIES

- Oxygen index of 30 (Min.) when tested as per ASTM D 2863.
- Temperature index of 250°C (Min.) when tested as per ASTM D 2863.
- Acid gas generation max. 20% by weight as per IEC 60754-1.
- Smoke density rating 60% (Max.) as per ASTM D 2843.
- Flame retardant property as per IEC 60332-3-22 Cat A / IEC 60332-3-24 Cat C.

MV CABLES WITH LOW SMOKE ZERO HALOGEN PROPERTY

APPLICATION

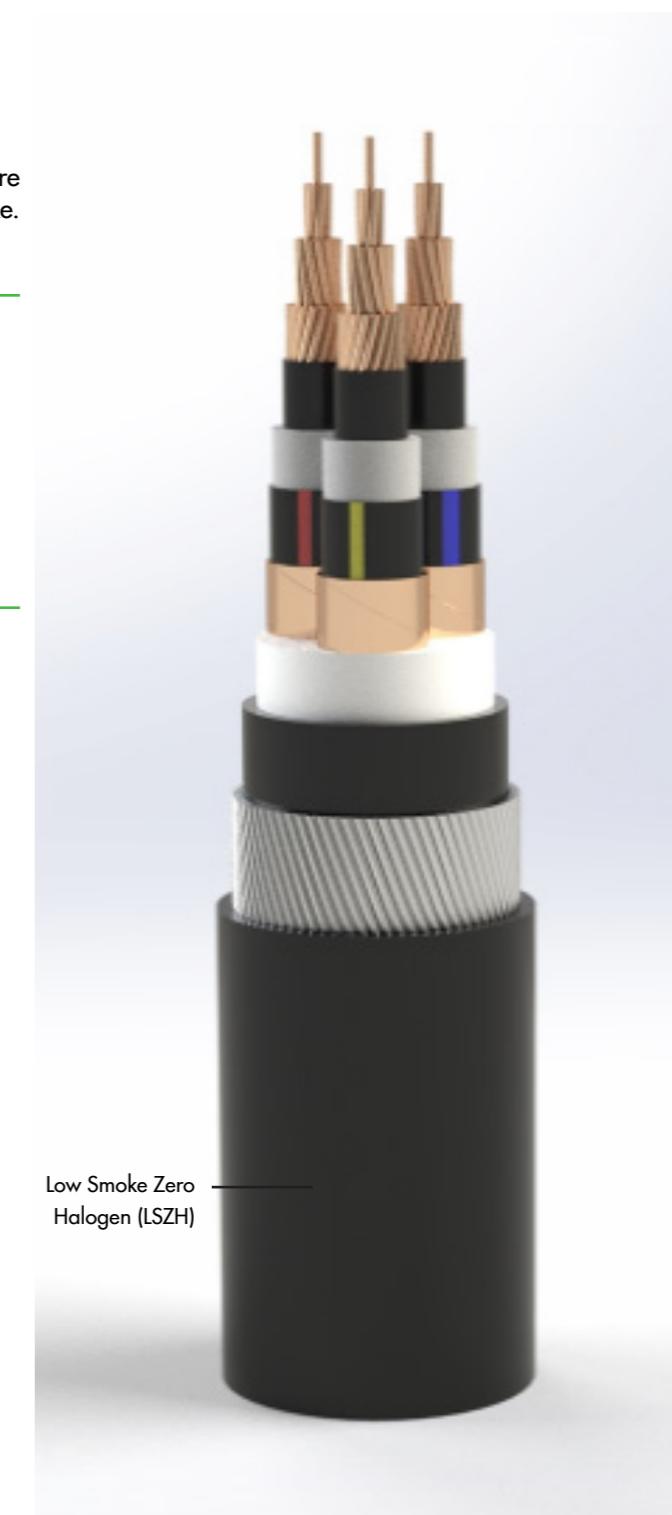

These cables are suitable for installations in where human life is at great risk due to fire & toxic smoke. E.g. Oil & gas sector, hospitals, airports etc.

CONSTRUCTIONAL FEATURES

Oman cables has the capability to manufacture medium voltage grade cables with Low Smoke Zero Halogen (LSZH) Outer Sheath.

SPECIAL PROPERTIES

- Oxygen index of 29 (Min.) when tested as per ASTM D 2863.
- Temperature index of 250°C (Min.) when tested as per ASTM D 2863.
- Acid gas generation max. 0.5% by weight as per IEC 60754-1.
- Min. light transmission 60%, as per IEC 61034 (Part 1 & 2).
- Flame retardant property as per IEC 60332-3-22 Cat A / IEC 60332-3-24 Cat C.

MV CABLES FOR VARIABLE FREQUENCY DRIVES (VFD) APPLICATION

APPLICATION

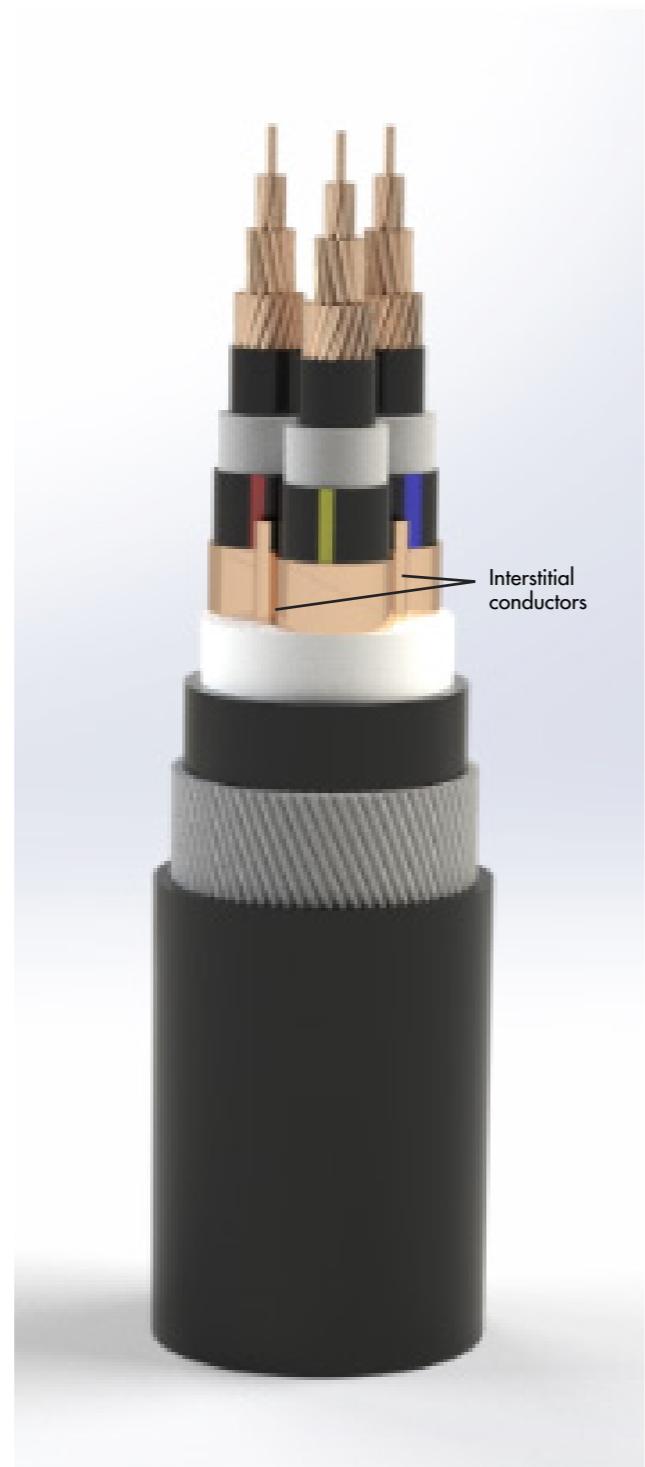

These cables are suitable for industrial installations.

CONSTRUCTIONAL FEATURES

Oman cables has the capability to manufacture medium voltage grade cables with interstitial bare conductor(s). Size of interstitial conductor(s) shall be equal to half of the phase conductor. Interstitial conductor can be one or three, depending upon the requirement.

SPECIAL PROPERTIES

Cables with interstitial conductors.

Cable Laying & Installation Guidelines

CABLE LAYING AND INSTALLATION GUIDELINES

A) SELECTION OF ROUTE:

A.1 The selection of the route should first be decided keeping in view the immediate and ultimate use of the cable as an integrated part of the transmission and distribution system.

A.2 For a feeder run, that side of the street which presents the least obstacles and the fewest roadway crossings is naturally chosen, but if a distributor is being laid concurrently with feeders, prospects of future consumers may influence the decision on this point. In such cases, distributors should always be laid nearest to the buildings.

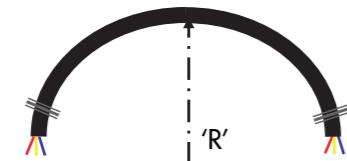

A.3 For transporting the cable drums to work site, it is necessary to check the road conditions, whether it has loose soil, is marshy, water logged, etc. including turns and widths. Special attention should be paid to the load bearing capacity of the bridges and culverts and other obstructions which fall in route.

A.4 If possible, cables should be laid along the footpath rather than the carriage way. Plans for future building projects should be considered. The route should be, as far as possible, away from parallel running gas, water pipes and telephone / telecommunication cables.

A.5 Suitable locations for cable joints and end terminations should be selected as required.

B) MINIMUM PERMISSIBLE BENDING RADIUS:

B.1 The cable should not be bent to a sharp radius. Minimum recommended bending radius 'R' should be maintained during installation.

B.2 Minimum recommended radius during installation shall be maintained as mentioned below:

CABLE TYPE	1 CORE	3 CORE
Un-armoured Cables	20 x OD	15 x OD
Wire Armoured Cables	15 x OD	12 x OD
Tape Armoured Cables	20 x OD	15 x OD
Armoured Lead Sheathed Cables	20 x OD	17 x OD
Armoured Drylam Cables	17 x OD	17 x OD

C) MINIMUM TEMPERATURE DURING INSTALLATION

Cables shall be installed when both the cable and ambient temperatures are above 0°C and have been so for at least the previous 24 hours before installation.

D) MAXIMUM PERMISSIBLE PULLING FORCE

Maximum pulling force is the force above which cables are not recommended to get pulled. Cables are pulled with various methods e.g. Stocking, Pulling Eyes, Winch. Maximum pulling force is calculated as mentioned below:

D.1 Cables when pulled with Stocking:

The maximum permissible pulling force when pulled with stocking, depends upon the cable type i.e. Armoured & Un-Armoured.

D.1.1. Maximum pulling force for Un-armoured cables, 'P'
 $P = 5 \times [\text{Cable OD}]^2 \text{ (mm)}$

..... Newton

D.1.2. Maximum pulling force for Armoured cables, 'P'
 $P = 9 \times [\text{Cable OD}]^2 \text{ (mm)}$

..... Newton

D.2 Cables when pulled by Pulling Eye:

When the cables are pulled by gripping the conductor directly with pulling eye, The maximum permissible pulling force, depends upon the conductor material & their cross-sectional area.

D.2.1. Maximum pulling force for Copper Conductor, 'P'
 $P = 50 \text{ N/mm}^2 \times \text{Total Cross-sectional Area (mm}^2\text{)}$

..... Newton

D.2.2. Maximum pulling force for Aluminium Conductor, 'P'
 $P = 30 \text{ N/mm}^2 \times \text{Total Cross-sectional Area (mm}^2\text{)}$

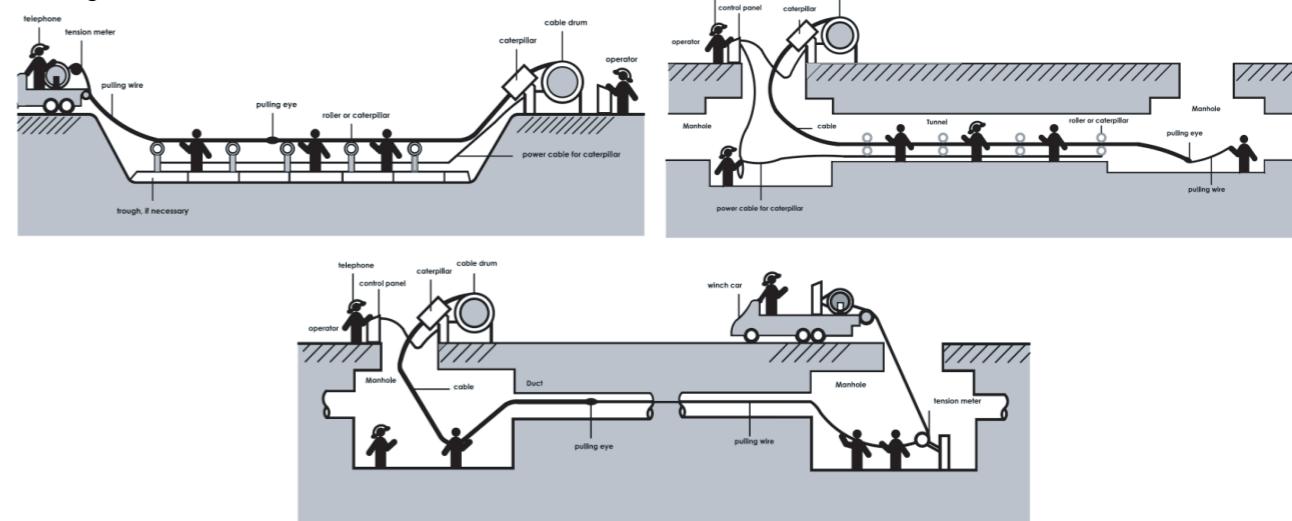

..... Newton

E) CABLE LAYING METHODS

The conventional methods of cable laying are:

- a) Laying direct in ground.
- b) Drawing in ducts.
- c) Laying on racks in air.
- d) Laying on racks inside a cable tunnel.
- e) Laying along buildings or structures.

The best choice of any cable laying methods depends upon the actual installation conditions, initial cost of laying, cable type, maintenance and repair charges, desired ease in replacement of any cable or adding new cables etc.

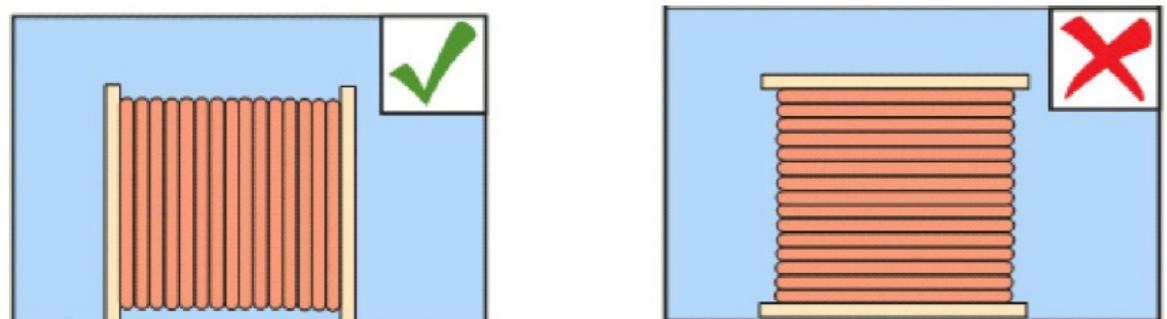

Cable Drum Handling Guidelines

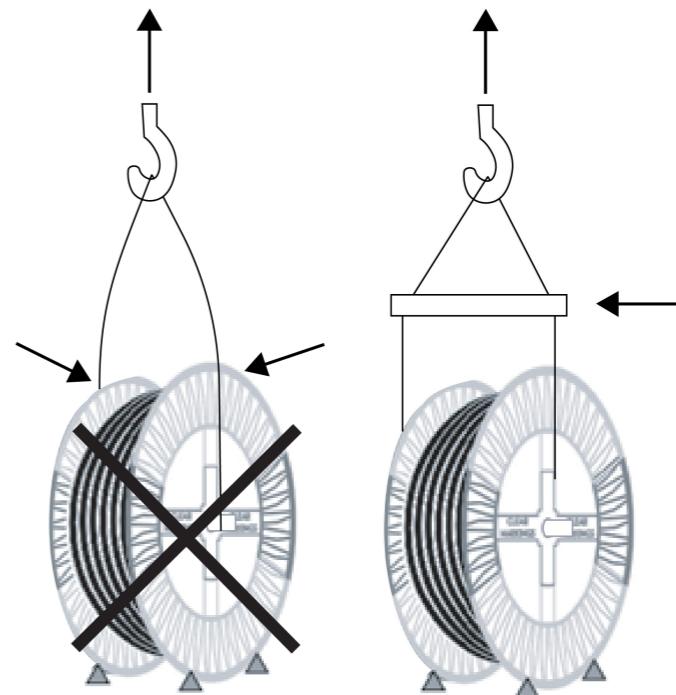

CABLE DRUM HANDLING PROCEDURE

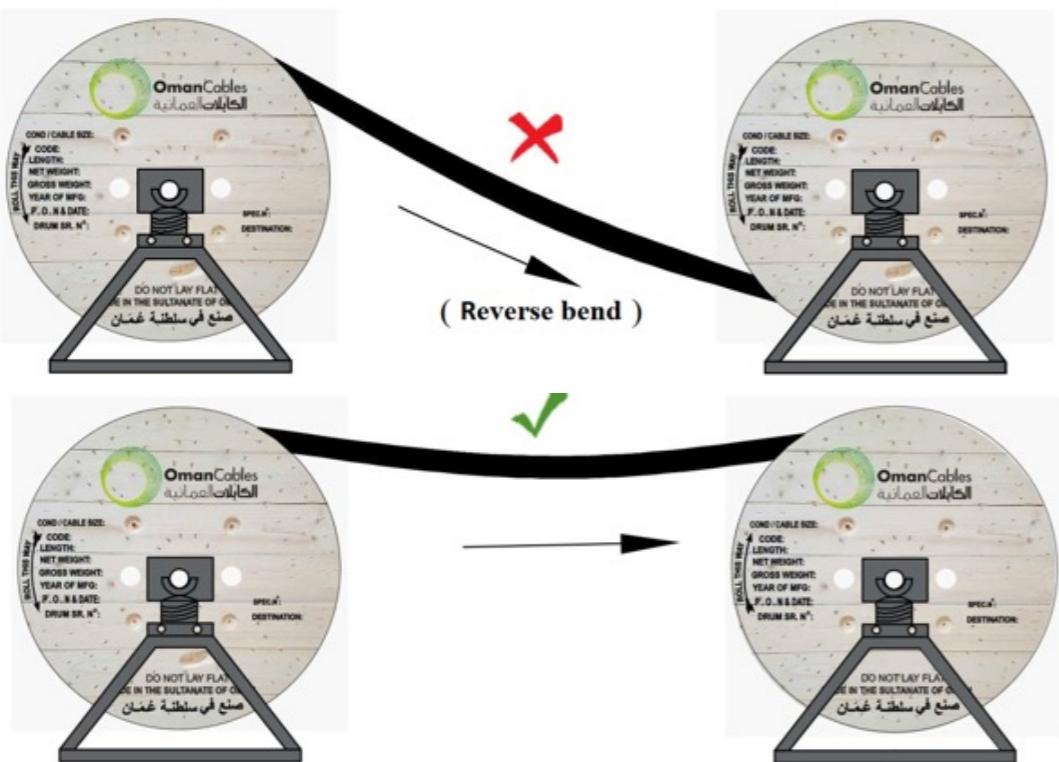

Lift drums on fork trucks correctly

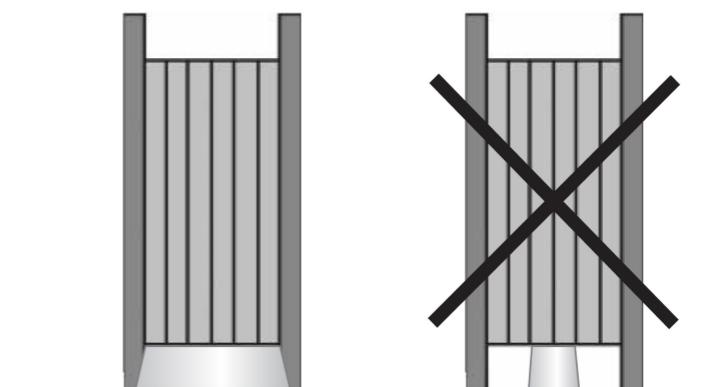

Cable drum shall be placed has shown in above figure.

Lift the cable drums using crane & support.

Cable drum re-winding shall be done as shown in above figure.

Use proper wedges to prevent drum rolling

QUALITY ASSURANCE

In order to ensure the best quality assurance system, it is extremely desirable to test and inspect the product at each stage of manufacturing including raw materials and finished product.

Oman Cables have the following Quality Assurance System:-

- A. Raw Materials Inspection
- B. In-process inspection
- C. Finished product inspection

RAW MATERIALS INSPECTION:

All the raw materials are procured only from internationally approved companies known for their quality products and once the material is received with their product certification, Oman Cables quality team tests and inspects the same again. Only those materials which meet Oman Cables internal standards are released for production.

IN-PROCESS INSPECTION:

A team of well experienced and qualified personnel, dedicated to quality, inspects and test all the In-Process materials at every stage and materials complies to the specified requirements are only released for next process.

FINISHED PRODUCT INSPECTION:

Oman Cables products before leaving ware house undergo the entire applicable test according to the standard to which it is manufactured. Routine tests are carried out for conformity to the specifications on 100% cable drums. Sample tests and type tests are carried out at regular intervals as per the applicable standards to conform the product quality.
